3. Introduceți următorul termen în al doilea câmp de căutare (**3**) și alegeți un termen boolean (**4**): AND (caută documentele ce cuprind cele două cuvinte legate prin AND în cadrul aceluiași paragraf),OR (atât cuvântul de dinainte cât și cel de după operatorul OR pot apărea în documentul căutat, dar nu obligatoriu împreună) NOT (baza de date va găsi documente conținând termenul de dinaintea operatorului logic,darcare în mod explicit, nu conțin termenul de după acesta)

Purpose – The purpose of this paper is to discover the most important genes generated by the gene expression arrays, responsible for the recognition of particular types of cancer.	References (12)
Design/methodology/approach – The paper presents the analysis of different techniques of gene selection, including correlation, statistical hypothesis, dusterization and linear support vector machine (SVM).	Citations Scopus (1)
Findings – The correctness of the gene selection is proved by mapping the distribution of selected genes on the two- coordinate system formed by two most important principal components of the PCA transformation. Final confirmation of	Further reading
